

## MoRAP is working with DNR on boundary files for State Parks - Update 1999

MoRAP is currently updating the Department of Natural Resources (DNR) parks boundary coverage. This data will be included in the Stewardship layer update for 1999.

DNR provided MoRAP maps of the state park boundaries. These maps are being scanned and converted to a grid which is then registered to the USGS Digital Raster Graphs (DRG). After on-screen digitizing the maps in ArcInfo, a database is constructed containing the parks name. Once the data is proofed and final QA/QC performed, the data will be written to a CD-ROM for transfer to DNR.
